

10ml Dropper Bottle Template

-  **Safe area** Keep all your text inside this border
-  **Trim** Outer edge of sticker
-  **Bleed** This area will be cut away

1. Copy, paste and design your artwork on the “your label” layer

2. Layout your artwork appropriately so as to fit within the safe area on the label. Allow some graphics between the trim lines and the bleed line to create a professional image. This is done to leave no “white space” at the edge of the label

3. Save your file as an Inkscape file first by clicking “file save” and naming as appropriate. Then create a file to send to us by clicking “file save a copy”, choose “save as type” encapsulated postscript (EPS) and then in the options box which appears ensure “convert texts to paths” to ensure accurate text reproduction on your label.
