

## 15mm Double Walled PET Jar

**Please Note:** We do not offer a circular label for the bottom of this jar due to the shape on the underside of the jar. The concave underside makes it impractical to label on the bottom of the jar and there is not enough space for a layout of all relevant details on the top of the jar.

-  Cut Line (The label edge)
-  Safe Area (your text should be within this area)
-  Bleed Space (This area will be trimmed off)

1. Copy, paste and design your artwork on the "your label" layer

2. Layout your artwork appropriately so as to fit within the safe area on the label. Allow some graphics between the time lines and the bleed line to create a professional image. This is done to leave no "white space" at the edge of the label

3. Save your file as an Inkscape file first by clicking "file save" and naming as appropriate. Then create a file to send to us by clicking "file save a copy", choose "save as type" encapsulated postscript (EPS) and then in the options box which appears ensure "convert texts to paths" to ensure accurate text reproduction on your label.
