

-  Cut Line (The label edge)
-  Safe Area (your text should be within this area)
-  Bleed Space (This area will be trimmed off)

**1. Copy, paste and design your artwork on the “your label” layer**

**2. Layout your artwork appropriately so as to fit within the safe area on the label. Allow some graphics between the time lines and the bleed line to create a professional image. This is done to leave no “white space” at the edge of the label**

**3. Save your file as an Inkscape file first by clicking “file save” and naming as appropriate. Then create a file to send to us by clicking “file save a copy”, choose “save as type” encapsulated postscript (EPS) and then in the options box which appears ensure “convert texts to paths” to ensure accurate text reproduction on your label.**
